

I am informing you of my displeasure, over your intentions to begin regulating Satellite

Radio. The content of any broadcast should be govern by the marketplace and the quality any broadcaster is willing to put into it.

Satellite Radio has been a huge jump in quality over regular, over the air broadcast, along

with the ability to lisiten to my favorite station ,without commercial interruptions is a major advantage to the consumer.

Now XM Satellite Radio wants to add local weather and traffic to its line-up, good for them.

If the NAB showed more concern with improving its product, rather than paying off

politicians to get a monoply on what we americians are able to listen to. They would not

need goverment intervention.

I urge the FCC to reject NAB's petition 04-160.

Regards,

Gary Evers
